

## Why do we use Goat and Kangaroo Leather in our Structural Gloves?

- **Goatskin has a high natural oil content which makes it soft, pliable and water resistant.**
- **Goatskin is more durable than cowhide and much lighter and more flexible.**
- **Kangaroo is stronger, more durable, suppler and more water resistant than any other leather.**
- **Even when thin, Kangaroo retains its natural strength and durability, 4x that of cow leather.**
